FUJITSU PRIMERGY BX922 S2 DUAL-SOCKET SERVER BLADE

FUTURE-ORIENTED SERVER BLADE WITH ALL THE PREREQUISITES FOR VIRTUALIZATION ENVIRONMENTS

The PRIMERGY BX Blade Servers are the ideal choice for data center solutions of today and tomorrow. Our blade servers provide maximum performance and maximum redundancy, but with only minimum space requirements, low power consumption and a reduction in the time and effort required for cabling. The PRIMERGY BX system family is designed to share components between chassis in order to react quickly and easily to changing business requirements. Storage and server blades can be added without any extra effort, as would be needed when cabling or adding management software. You can use the same applications, rely on the same server and storage components and establish connections to the same networks. The PRIMERGY BX Blade Servers are flexible and have complete control via a central administration instance that is redundant in design; they minimize administrative time and effort, freeing you of time-consuming administration tasks. Our build-to-order process ensures that only completely installed and previously tested solutions are supplied, which have been precisely adapted to individual requirements and which will grow with future business requirements.

PRIMERGY BX922 S2

The PRIMERGY BX922 S2 Server Blade uses up to two CPUs in the Intel® Xeon® processor 5000 sequence with up to 6 cores, including the first 32nm processors. Chipset and CPU offer comprehensive, hardware-based virtualization support, which is supplemented by the additional functions on the new onboard Gigabit Ethernet Controller Intel® 82576. The main memory configuration with up to 12 DIMM modules rounds off the picture - the road is open for consolidation strategies which are aligned with virtualization with hypervisor solutions from VMware, Microsoft, RedHat, Suse or Citrix. The design of the PRIMERGY BX922 S2 is very flexible regarding the boot options as - in addition to the increasing use of SAN or NAS - local booting via Solid State Disks and - especially for VMware ESXi - via a USB connected flash module is available. The efficient administration of the entire system via ServerView is supported by the integrated Remote Management Controller (iRMC S2); the hardware monitoring and setting options can thus be optimally visualized in order to use all options at the highest energy-efficiency levels.

FEATURES AND BENEFITS

MAIN FEATURES	BENEFITS
<p>PERFORMANCE DUE TO PROCESSOR TECHNOLOGY</p> <ul style="list-style-type: none"> Two Dual-Core, Quad-Core or Six-Core CPUs with Intel® Xeon® processor 5500 and 5600 series with Turbo Boost technology, Demand Based Switching, QuickPath Interconnect (QPI) and internal Memory Management Unit. The Intel® QuickPath architecture memory controllers provide the BX922 S2 with a high-speed bandwidth of up to 25 Gigabytes/second (GB/s) between the individual processors, the processors and the memory, as well as between the processors and the I/O hub. Prepared for the next CPU generation with up to 6 computing cores. <p>TOP VIRTUALIZATION SUPPORT</p> <ul style="list-style-type: none"> Two integrated dual-port Intel® 82576 Gigabit Ethernet controllers are standard. The integrated Intel® virtualization technology for connectivity contains - in addition to I/O acceleration technology and the Virtual Machine Device Queues - Single Root IO virtualization SR-IOV as well. Two PCI Express 2.0 Mezzanine slots with a combination of Quad Gb Ethernet, Dual 8 Gb Fibre Channel, Dual-Channel 10Gb Ethernet and Dual-Channel 40 Gb Infiniband (QDR) offer excellent connection features via a high-performance midplane. The high server blade I/O capacity allows optimal use of various I/O protocols, ensuring smooth operations for demanding applications. <p>FLEXIBLE BOOT OPTIONS</p> <ul style="list-style-type: none"> Various server boot options, e.g. from the network, from Solid State Drives or a USB Flash module (for VMware ESXi) make the server ideal for every application. It is an excellent platform for both virtualized and physical environments. <p>WORRY-FREE ADMINISTRATION</p> <ul style="list-style-type: none"> Management through integrated Remote Management Controller (iRMC S2) enables individual server access and extensive control, even at remote locations. The integrated Pre-failure Detection and Analysis function provides reliable operations in all circumstances. 	<ul style="list-style-type: none"> Tunable performance with consistent power consumption and even heat dissipation. Investment protection through technical preparation for next generation processors. Best-in-class I/O connectivity. High flexibility regarding the type of I/O connection. As a result of bypassing the internal hypervisor virtual switch SR-IOV enables virtual machines to reach a performance level which is almost the same as pure physical machines. Multiple use, optimized for virtualization and extremely energy efficient regarding usable local boot media. Easy and reliable management and control.
