

It's time to up your work from home game.

As most states are going into their third or fourth month of working from home, many companies are announcing that employees can remain working from home indefinitely. Now that a temporary situation is turning long term, there's some ways to improve efficiencies at home with minimal up-front cost and implementation.

Digitizing documents is a critical step. By scanning documents such as receipts, client files, and invoices, you can process, organize, save and share those documents much easier and more securely than paper.

Fujitsu, the industry leader in document imaging, has three excellent document scanners perfect for work from home scenarios. With them, you can:

- Quickly and easily scan, digitize and organize critical documents – no need for IT resources!
- Compress digital file size while eliminating storage space needed for paper
- Reduce paper processing and preparation time
- Produce exceptionally clean images better than the original
- Maintain an organized and productive work space
