

Xi Frame

Simplify Digital Workspaces as a Service

The digital workspace is spearheaded by technology and innovation that enables end-users to access services, tools, and applications from any connected device regardless of their location. Not all digital workspaces are created equal. With greater access, comes greater responsibility. There are six criteria used to measure the success of delivering a digital workspace: simplicity, scalability, speed, security, savings, and performance. These factors encompass the three blockers of digital workspace integration and delivery success – cost, complexity, and cloud choices. And these factors have to be tempered with the rigor and discipline required in delivering good on the CIO's SLA.

Nutanix has extensive experience in end-user computing (EUC) and virtual desktop infrastructure (VDI) with 2,500+ VDI customers globally. We are leveraging our VDI and EUC experience to provide a simple yet powerful platform that scales to your digital workspace needs now and into the future. Nutanix Frame is a public cloud service that empowers any organization to deliver their digital workspace as a service through a fully managed platform.

KEY BENEFITS

Create your digital workspace faster and deliver your end-user's applications and desktop virtualization as a service with more ease and reliability using Nutanix Frame.

- Connect from any web browser
- Bring and run your apps
- Choose your Infrastructure-as-a-Service provider
- Use your preferred IAM, GPU, and cloud storage services
- Deliver high performance and cloud scalability to end-users anywhere on any device

CUSTOMERS

- KPF
- Autodesk
- ENERCALC

DIGITAL WORKSPACE WITH SEAMLESS INTEGRATION AND DELIVERY

Nutanix Frame provides do-it-yourself simplicity with automated, fully managed cloud service solution that simplifies the continuous integration and continuous delivery of the digital workspace. Frame delivers Windows or Linux apps and desktops to their end-users via web browsers like Chrome, Safari, Firefox, Edge, and Internet Explorer. Frame provides a faster time to value and removes the barriers to deliver and consume virtual desktops and virtual apps.

SECURE, LEAN, AND AGILE BY DESIGN

The CIO's SLA is the CIO's service level agreement to business leaders, business stakeholders, and end-users. For IT organizations, the CIO's SLA means security, lean, and agility.

Security is protecting the company's assets. With Frame, users can securely access applications with any device, managed and un-managed, in any location by just using a browser. Better security extends to the non-persistent VM state and sessions and the ability to prevent users from downloading data onto the endpoints. This minimizes the risk of intellectual property theft. Moreover, Frame is FedRAMP Ready for AWS GovCloud and Azure Government.

Lean is maintaining cost efficiency while making it easy to focus on end-user's application and services. This means that the knowledge to design, build, and maintain the application and desktop platform isn't needed. Next, there is no up-front capital investment required as organizations can pay as they grow.

Agility is empowering the freedom of choice to pivot to the solution that provides the fastest time to value while never being locked in. Frame partners closely with major cloud service providers like Microsoft Azure, Amazon Web Services, and Google Cloud Platform to deliver the best user experience locally. Frame seamlessly integrates with best of breed vendors like AD/ADFS, Okta, and Ping Identity for IAM; NVIDIA for GPU; and OneDrive, Google Drive, Dropbox, and Box for cloud storage and collaboration. Finally, Frame is elastic with the ability to scale up and down capacity with one click and automatically power up and power down desktops and apps to accommodate variations in usage.

TEST DRIVE NUTANIX FRAME TODAY

Experience Frame for yourself with a free 2-hour Test Drive. Run your Windows or Linux software in a web browser with no additional hardware and no cost. See how Frame can simplify your digital workspace integration and delivery from public and hybrid clouds to your end-users.
