

SECURE AUTHENTICATION

Single-tap, mobile-based authentication provides help in securing your data in a hassle-free way in addition to meeting required compliances

CYBERSECURITY
EXPERTS ON YOUR SIDE

The ESET difference

SIMPLY CHOOSE YOUR INTEGRATION METHOD

ESET Secure Authentication was designed to work as a standalone solution, operated via a web console. In a Windows Domain environment, you can choose to integrate with Active Directory. This makes setup and configuration quick and easy and eliminates any additional training to deploy 2FA in your organization.

NO DEDICATED HARDWARE REQUIRED

All the costs of ESET Secure Authentication are built in as it requires no dedicated hardware. Simply install the 10MB application on any server and start provisioning.

WORKS WITH EXISTING SMARTPHONES

No need for special tokens or devices for employees. ESET Secure Authentication works with a broad range of smartphones.

QUICK AND EASY SETUP

Many development hours were put into the creation of ESET Secure Authentication to ensure that setup was as easy as possible. We set out to create an application that a small business with no IT staff could set up and configure. Whether a business has five users or 100,000 users, ESET Secure Authentication, due to its ability to provision multiple users at the same time, keeps setup time as quick as possible.

FULL SDK AND API INCLUDED

For enterprises or companies that want to do even more with ESET Secure Authentication, we include a full SDK and API that businesses can use to extend the functionality to fit their needs.

PUSH AUTHENTICATION

Lets you authenticate with a single tap, with no need to retype the one-time password. Works with iOS, Android and Windows 10 Mobile phones.

“Single server install, ease of setup, integration with Active Directory and one of the major pluses, an application we could give our staff members so there was no need for constant SMSs. On top of this, the fact it works seamlessly with open VPN made us very happy as we didn’t have to change our VPN setup to accommodate the software.”

Tom Wright, IT Service Officer, Gardners Books

Authenticate with a single tap,
with no need to retype the
one-time password.

Technical features and protected platforms

PUSH AUTHENTICATION

A single-tap authentication with all iOS, Android and Windows 10 Mobile smartphones.

OTHER WAYS TO AUTHENTICATE

ESET Secure Authentication supports mobile applications, push notifications, hard tokens and SMS for OTP delivery, as well as custom methods.

REMOTE MANAGEMENT

Via the ESET Secure Authentication web console or Microsoft Management Console (MMC). Integrates with Active Directory for easy management, or works standalone for organizations without a Windows domain.

PROTECTION SUPPORT

Virtual Private Networks (VPN), Remote Desktop Protocol (RDP), Outlook Web Access (OWA), VMware Horizon View and Radius-based services are all natively supported by ESET Secure Authentication.

ADDITIONAL OS PROTECTION

Additional authentication for desktop logins and privilege escalation are also protected by multifactor authentication.

Supports Windows as well as macOS and Linux.

CLOUD SUPPORT

In addition to on-premise applications, ESET Secure Authentication also supports web/cloud services such as Google Apps and Microsoft ADFS 3.0 (including Office 365).

HARD TOKEN SUPPORT

Even though hard tokens are not required, all event-based HOTP tokens that are OATH-compliant are supported, as well as FIDO2 and FIDO U2F hardware keys.

SUPPORTED VPNS

Barracuda, Cisco ASA, Citrix Access Gateway, Citrix NetScaler, Check Point Software, Cyberoam, F5 FirePass, Fortinet FortiGate, Juniper, Palo Alto, SonicWall.
