

JAMF SIMPLIFIES APPLE DEVICE MANAGEMENT AND SECURITY

How you choose to secure and manage your Apple ecosystem can make an incredible difference to your organization and its users. Whether you're a small workgroup with 10 people or an enterprise with over 10,000 employees, Jamf delivers an exceptional user experience while simplifying management and amplifying security for IT Pros.

Jamf provides end-to-end support for all Apple devices running macOS, iOS, iPadOS, tvOS, watchOS, or visionOS. Built on a modern architecture with 99% uptime, Jamf can even be hosted within your AWS or Azure instance.

Level Up Your Endpoint Management with Best-of-breed Jamf Solutions from Connection

Deployment

- Establish your organizational device standards while maintaining Apple's out-of-box experience.
- Utilize Jamf Pro for modernized provisioning and deployment.

Device Management

- Optimize the user experience through policies and scripting while reducing IT operations.

App Management

- Streamline app provisioning and procurement using out-of-box self-service features.
- Empower the workforce to maintain their own devices.

Security

- Secure your Apple devices by using built-in security features.
- Manage settings, restrict malware, and patch devices automatically.
- Enhance security and access management with Jamf Protect and Jamf Connect.

Integrations

- The Jamf platform provides boundless integrations and configurations to seamlessly fit into your tech stack and simplify IT processes.
