

Data Center Landscape Optimization

Transform Your Data Center with Expert Advice

What Is a Data Center Landscape Optimization?

Data Center Landscape Optimization (DCLO) is a value-added activity offered at no cost to provide insight into your data center environment. It will provide information to identify gaps between your current state and a more optimal state. It will also help prioritize the efforts needed to make strategic improvements toward your desired state.

How Can You Benefit from a DCLO?

If you are experiencing a drain on IT budget and resources, having problems with performance, reliability, or scalability, this activity will help you:

- Discover and document your current data center landscape
- Identify gaps and overlaps residing within your data center
- Identify areas that could reduce complexity and increase optimization / efficiency
- Prioritize strategic planning and remediation efforts

How Does It work?

We follow a three-step process consisting of interviews, data collection, and analysis to ensure we capture business priorities and pain points, as well as objective data about your environment.

DISCOVERY

- Introduction of DCLO service
- Discovery call with identified stakeholders
- Install and run necessary tool(s)

ANALYSIS

- Analyze data from discovery call and tool(s)
- Compare current state to optimal state
- Identify gaps and areas of improvement

REPORT

- Create DCLO workbook:
 - Current state profile
 - View of environment by gaps
 - Priority recommendations (Phase One)
 - Strategic end state recommendations (Phase Two)
- Present findings

Next Steps

If this is something you would like to explore further, contact an Account Manager today, and they will coordinate this extremely valuable risk management solution for you.
